WHAT IS RIDGE-GUARD®?

RIDGE-GUARD® is a patented protection system designed to prevent animals from entering the attic through ridge vents. It works best against bats, rodents, snakes, large insects, and more.

Ridge vents can warp over time, creating gaps for animals to enter the attic. Some animals can even chew through the plastic if they see a weak spot. Once animals get into an attic, the damage they cause can be significant. RIDGE-GUARD® is the solution.

**SEE HOW
CRITTERS GET IN
AND THE
DAMAGE THEY
CAUSE**

A red rounded rectangular box containing a QR code on the left and a black silhouette of a squirrel on the bottom left. To the right of the QR code is the text "SEE HOW CRITTERS GET IN AND THE DAMAGE THEY CAUSE" in white, bold, uppercase letters.

WHY CHOOSE RIDGE-GUARD®?

DURABLE

DEPENDABLE

PROFESSIONAL

DURABILITY

RIDGE-GUARD® and most other products from AAC Distributing are made using heavy duty 20 gauge galvanized expanded steel. Here's more about the process and what makes RIDGE-GUARD® built to last:

GALVANNEALING

Galvanized steel is more durable and corrosion resistant than galvanized steel.

Zn

20 GAUGE

20 GAUGE SHEET METAL

This is the perfect thickness for both durability and flexibility that allows the product to bend around corners.

EXPANDED METAL FORMING

The 20 gauge steel is transformed into an expanded mesh, which allows for airflow while still keeping out many larger insects.

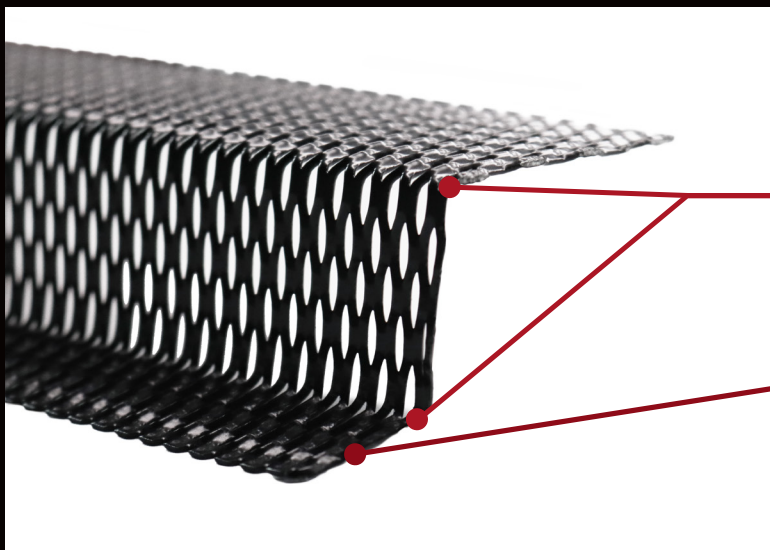

ROLL FORMING

Each piece of RIDGE-GUARD® is ran through a roll former to achieve the perfect angles for fitting tightly along the ridge of the roof.

POWDER COATING

RIDGE-GUARD® is powder coated black to blend seamlessly with ridge vents, which are typically black. It also adds an extra layer of durability and corrosion resistance.

DEPENDABILITY

An obtuse bottom angle and acute top angle create a pinching effect that keeps the product tight to the ridge

Self-sealing screws are installed on this tab only. The screws use the material in the shingles and friction to create a leak-proof seal.
